5. Goto the “Wireless Security” and fill the fields according to the next picture and click “Save”

The screenshot shows a window titled "Editing Wireless connection 2". At the top, there is a text field for "Connection name:" containing "Wireless connection 2". Below this is a checked checkbox for "Connect automatically". There are four tabs: "Wireless", "Wireless Security" (which is selected), "IPv4 Settings", and "IPv6 Settings". The "Wireless Security" tab contains several settings:

- Security:** A dropdown menu set to "WPA & WPA2 Enterprise".
- Authentication:** A dropdown menu set to "Protected EAP (PEAP)".
- Anonymous identity:** An empty text field.
- CA certificate:** A dropdown menu set to "(None)" with a file icon to its right.
- PEAP version:** A dropdown menu set to "Automatic".
- Inner authentication:** A dropdown menu set to "MSCHAPv2".
- Username:** A text field containing "training.local\username".
- Password:** A text field containing eight dots, with a red border around it.
- Below the password field are two unchecked checkboxes: "Ask for this password every time" and "Show password".

At the bottom of the window, there is a checked checkbox for "Available to all users" and two buttons: "Cancel" and "Save...".
